

Case Study: Legacy - Last Minute Cyber Insurance Requirements

MFA, Email Security, Advanced Anti-Virus, Vulnerability Management, SEIM, Data Backup & Training

For 40 years, Legacy has grown and evolved as a pioneering Transportation and Logistics provider.

Businesses depend on the Legacy team to create control over their dynamic omni-channel supply chains – so they can stay more connected to their consumers and ultimately deliver better experiences.

THE CHALLENGE

Like so many others, Legacy was caught off guard by their insurance company when they were informed that certain cybersecurity controls had to be implemented if they were to be approved for their cyber policy renewal.

THE Opportunity

Luckily, Jim and his team was already familiar with ACS from earlier business together and thought to ask us for help.

He knew that we could work quickly with their team to scope and design the solution quickly and correctly.

THE SOLUTION

In less than two weeks, the contracts were signed, and the ACS team began the implementation. Legacy elected to be more hands-on in the installation process and so we gave direction and assistance as the MSSP while they were the primary 'hands on keyboards'.

ACS was able to prove ourselves with the delivery of necessary cybersecurity services in a client's most needed time. This only enhanced the relationship we have, and we will look to expand our offering to them as time goes on.

Jim was impressed by the speed and thoroughness of our capabilities. ACS was able to help at a critical juncture in the client's cyber maturity. They appreciated our attention to detail and understanding of the insurance industry as it relates to cyber security.

“We’ve been working with these folks for years and there was no doubt who my first call was going to be!”
