

Your Next SD-WAN Provider

1Wire Software Defined Wide Area Network (SD-WAN) keeps your branches connected and running uninterrupted

Reduce complexity and cost while improving bandwidth, reliability and visibility. Replace or enhance MPLS connections by introducing SD-WAN technology to your network and improve user experience and productivity.

Simplifying Wide Area Networking

When setting up multiple branch offices, the challenge to setup each location with variable connectivity options and unique usage criteria can be daunting. With SD-WAN, you can eliminate complex routing configurations on dedicated hardware and expensive Internet connections. SD-WAN provides powerful features that solve last mile connectivity limits and let the most remote branches join your private WAN.

Benefits

Bonded Bandwidth

Combine multiple Internet connections of any type from any carrier to scale bandwidth for both download and upload. Ideal for remote branches struggling to meet bandwidth requirements.

Same-IP Failover

With multiple Internet connections tethered together, one can fail, and the others pick up instantly. Because they default to the same IP, your logged in sessions to critical Apps stay logged in with no interruptions.

Site-to-site Encryption

Keep your WAN traffic private over public Internet links. No need for VPN hardware or software to encrypt your data between locations.

Traffic Management and QoS

Prioritize critical Apps within your WAN and improve VoIP quality on shared connections.
