

Introduction

Alchemy Security can unlock value from your Splunk deployment by providing a wide range of solutions common to the needs we have observed from clients over the years. Because we place a high value on customer success, Alchemy Security maintains a deep bench of Splunk certified architects, consultants, and content engineering experts, who are uniquely positioned to satisfy the most challenging Splunk requirements. This offer summary provides a high-level overview of the consulting and professional services options that makes our clients more successful leveraging the Splunk platform and suite of premium products.

Health Checks

Is your organization having performance issues with your Splunk Core or Enterprise Security deployment? Our Splunk experts are here to help! Our 30+ point Health Check includes a thorough assessment of your Splunk infrastructure to identify common bottlenecks that inhibit system performance and system stability. We will ensure that known Splunk configuration and application issues are identified, the systems architecture is appropriate for the size and usage requirements, as well as review security controls. Once the Health Check is completed, we will remediate any findings we are able to quickly address, and provide a strategic roadmap for long term Splunk maturation.

Content Authoring & Subscription Services

As they saying goes, “*Content is king.*” We couldn’t agree more. Your organization purchased Splunk to solve real world security, operations, and related business challenges, yet many deployments seem to miss the mark because they lack the content to extract meaningful value from your data.

On the cyber security front, we are experts in converting security stories into actionable results. Bring us your best security use cases and we will convert your security monitoring ideas into Alchemic gold. If you are short on ideas but know that you can do better, that is no problem for team Alchemy, we solve those sorts of challenges for clients on a daily basis. Our security use-case design exercises will clarify your thinking to help design a security content roadmap that solves your specific objectives and needs. Combining these service features, we can get you from zero to hero in a reasonable time frame.

Because we know that every budget dollar is valuable to our clients, our content authoring services can be custom tailored to specifically align to your needs and available budget.

Architecture, Planning Deployments & Upgrades

From new deployments or infrastructure expansion to adopting a cloud strategy, Alchemy Security will ensure that your deployment is appropriately architected to maximize performance of your Splunk deployment. Deliverables include detailed architecture diagrams and technical specifications via supporting presentation materials to enlighten leadership and shorten the lifecycle to maturation.
