

MICROSOFT INTUNE CONFIGURATION SERVICES

ASSESS, DESIGN, AND PROTECT YOUR INTUNE IMPLEMENTATION

IT and cybersecurity leaders face the ongoing challenge to manage their infrastructure, secure critical data, and scale operations - all without compromising cybersecurity or workforce satisfaction. This is an especially delicate balance to strike. Because for most organizations, the only constant is change...whether that is the move to remote work, employee turnover, the move to cloud-based applications or even a new smart device getting added to your network without your knowledge.

Microsoft Intune is a pivotal tool in centralizing governance for all an organization's endpoints. As a cloud-based endpoint management solution included in many Microsoft licenses, Intune streamlines and enhances the configuration, management, and security of any enrolled device accessing organizational resources. This enables organization's to minimize their attack surface while ensuring compliance with regulatory standards.

Avertium's Intune configuration services provide robust technology enablement, starting with an assessment and roadmap, then followed by seamless implementation. This comprehensive process ensures a strong foundation for building an effective mobile device and Windows endpoint management program, leading to secure and scalable outcomes.

THE MARKET DEMAND

While the right endpoint management strategy can reduce your organization's risk, drive efficiency, enhance compliance, and even save you money, the wrong endpoint strategy can introduce business-critical threats.

Here's why:

- **Endpoints are increasingly the most prevalent attack vector, especially for bad actors who specifically target companies that use ubiquitous tools like Microsoft products** → With threats like malware, ransomware, and social engineering attacks, a single compromised endpoint can lead to devastating breaches, financial loss, and reputational harm.
- **The IT environment is constantly changing - and often without cyber/IT leaders' knowledge** → Many leaders struggle to keep track of every new endpoint introduced to the network, often leaving vulnerabilities undetected and putting sensitive data at risk.
- **Internal IT and cyber teams are stretched too thin due to expanding responsibilities and an over-reliance on manual processes** → As the demand for expertise in managing complex systems grows, many teams struggle to keep up.
- **Lack of in-house Intune expertise** → Setting up Intune properly takes significant upfront effort, and without the right expertise, many businesses struggle.

AVERTIUM'S INTUNE OFFERINGS

Avertium's experienced Microsoft Security professionals have made it their mission to help our customers get the most out of their entire Microsoft investment - and we understand that Intune is an integral part.

We've demonstrated that, with the right strategy, Intune can extend seamless operational management to endpoints, enabling organizations to better proactively protect against potential threats. So, whether you're just getting started or struggling to navigate Intune's complexities, Avertium can help.

Customers can choose one or more services from the following options:

OPTION 1 - ADP APPROACH

Avertium's **Intune Assessment and Roadmap** followed by our **Intune Implementation** follows our signature, comprehensive Assess-Design-Protect approach to properly deploy Intune, empowering you to build a secure and resilient endpoint and mobile device management program. By assessing your needs, creating a tailored implementation plan, and offering guidance for overcoming roadblocks, Avertium ensures your Intune deployment considers the broader business context so that your Intune implementation strategy is optimized for long-term success.

- **Mobile Device Management**
 - » Microsoft Intune Mobile Device Management (MDM) Assessment and Roadmap
 - » Microsoft Intune Mobile Device Management (MDM) Implementation
- **Windows Endpoint Management**
 - » Microsoft Intune Windows Endpoint Management Assessment and Roadmap
 - » Microsoft Intune Windows Endpoint Management Implementation

OPTION 2 - FAST TRACK IMPLEMENTATION

Are you short on time or have you already started down the Intune implementation path? No problem. Avertium provides full configuration and implementation of your Intune solution – whether for Windows endpoint management, MDM, or both – under a single, streamlined contract.

- **Mobile Device Management:** Microsoft Intune Mobile Device Management (MDM) Fast Track Implementation
- **Windows Endpoint Management:** Microsoft Intune Windows Endpoint Management Fast Track Implementation

WHY AVERTIUM?

With a deep bench of Microsoft certified engineers, security consultants, and compliance experts, Avertium leverages our proprietary **Assess-Design-Protect** approach and applies it to Intune, ensuring that CISOs and IT leaders can protect and scale their Windows endpoint and mobile device management, get the most out of their entire Microsoft investment, and remain aligned with their organization's goals.

Assess - Get clarity on your path forward. Whether you're focused on MDM or Windows endpoint management, every customer wants to know what to expect from a time, resources, and effort standpoint. Avertium's tailored assessments highlight the importance of the "Assess" phase by helping customers understand where they stand.

- **HOW:** Avertium evaluates your current Microsoft licensing and conducts customer interviews to understand business objectives, pain points, and compliance needs. We review your configuration settings against security best practices, product capabilities and compliance mandates, and provide tailored remediation recommendations based on the organization's risk tolerance.

Design - Map out your tailored path to success. With a customized roadmap that addresses your specific needs, Avertium provides a clear path for maximizing Intune's capabilities. This roadmap is designed to guide you seamlessly from assessment through to implementation, ensuring every step aligns with your business goals.

- **HOW:** Avertium develops a tailored roadmap for seamless Intune implementation based on your objectives, compliance requirements, and risk tolerance. Then, we educate on its capabilities and limitations and recommend the best fit to align with your business' goals.

Protect - Stay secure as you grow. Avertium properly configures, deploys, and integrates Intune with other security tools, ensuring success in endpoint and mobile device management while striking the balance of robust security and operational efficiency.

- **HOW:** We'll review the roadmap, confirm next steps, and implement remediation recommendations to provide a reliable and secure Intune platform.

OUTCOMES

MORE SECURE

Get a safer environment that prevents risk and adapts to emerging threats. Avertium's process is designed to serve your business and prioritize your cyber maturity.

MORE EFFICIENT

Take advantage of Microsoft Security capabilities while unburdening your security teams and reducing total cost of ownership.

MORE MATURE

Simplify, scale, and level up your security posture with Avertium's expertise, no matter where you are on your cyber maturity journey.

MORE VISIBLE

Achieve visibility over your entire endpoint and mobile device environment to reduce risk and stop threats.

ABOUT AVERTIUM

Avertium is a cyber fusion and MXDR leader, delivering comprehensive security and compliance services to mid-market and enterprise customers. Our unique "Assess, Design, Protect" methodology addresses and improves security strategy, reduces attack surface risk, strengthens compliance, and provides continuous threat protection. Avertium maximizes customer security investments and enables customers to focus on growth, innovation, and business outcomes, while assuring that their security infrastructure is resilient and adaptive to evolving threats. That's why customers trust Avertium to deliver better security, improved compliance, and greater ROI.
