

ETHERNET SERVICES

Fly Faster with Bluebird's Ethernet

As a Midwest super regional fiber provider, Bluebird Network helps its customers not only survive today's increasingly digital world, but thrive in it. With our robust fiber infrastructure and 151+ Points of Presence (POPs), your company's multiple sites and applications will stay connected - putting you ahead of the competition.

E-LINE SERVICES

EPL - Up to 100 Gbps point-to-point service to connect your sites

EVPL - Multipoint-to-multipoint service that connects various sites to one centralized location or data center

E-LAN

EP-LAN - Port based multipoint-to-multipoint service up to 100 Gbps

EVP-LAN - VLAN based multipoint-to-multipoint connectivity between various locations; allows multiple service types to be delivered on a single port

MOBILE BACKHAUL TRANSPORT

Our legacy SONET-based network architecture keeps Wireless Service Providers (WSP) connected to their cell sites and Mobile Telephone Switching Offices (MTSO) while providing scalability with our DS1 bandwidth through 100 Gbps wavelengths.

E-LINE SERVICES

Keep your company's data connected between multiple sites with our diversely routed and 100% committed bandwidth ethernet services. Services can be delivered per port or per VLAN basis and can be configured with one of three Class of Service profiles to support the applications of your company's differing departments with speeds up to 100 Gbps.

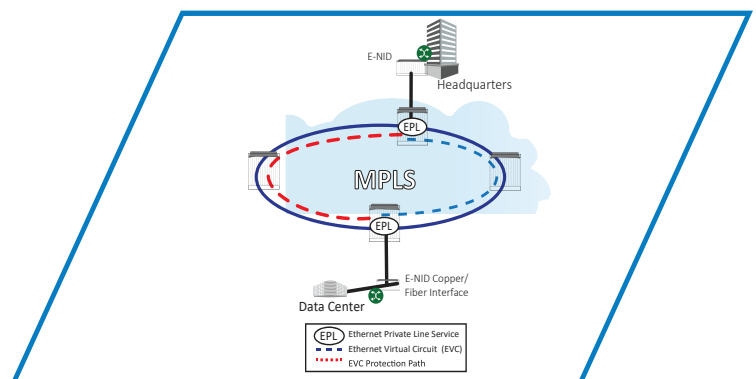

EPL & EVPL

To ensure your business' critical applications are running at maximum optimization, Bluebird Network installs an Ethernet Network Interface Device (E-NID) at every customer location. This allows us to monitor and prioritize application traffic to better serve your needs. Take advantage of our dedicated bandwidth, giving you unmatched security and privacy.

E-LAN

E-LAN services provide you with a direct channel of communication between multiple sites and devices without needing to pass through a central location. With a direct connection using Bluebird Network's fiber infrastructure, you can connect with users and devices across the street, the state, or the country.

MOBILE BACKHAUL TRANSPORT

With a single secure high-speed connection, we can consolidate your transport needs to securely deliver your multimedia data at world-class speeds. Our expansive network paired with our INDATEL, National Carrier and ILEC partnerships make it possible for your business communications to reliably make their destinations via Bluebird's world-class infrastructure.
