

Managed backup solutions to protect your critical business information

Regardless of your business goals, CBTS has a tailored data protection backup solution to meet your needs. Whether you want to retain control of your current backup environment with an off-site cloud target or if you want to hand the accountability over to the certified experts, we have answers.

Managed cloud backup

The CBTS Managed Backup solution is ideal for environments containing both physical and virtual workloads. This solution offers:

- Backup to CBTS high-availability robust data centers or AWS Public Cloud.
- Savings on bandwidth—we will never back up the same data twice.
- Simple, one-step recoverability from image-level backups.
- End-to-end management by CBTS certified professionals.
- Ability to offload the day-to-day burden of ensuring working, recoverable backups in the event of an incident
- Reporting tools provide oversight into all your data and backup performance.

Remote backup management

The CBTS Remote Backup Management solution is ideal for customers who want to leverage existing license agreements or solutions but want CBTS to monitor and manage.

- Reduced CapEx for software and infrastructure and operational overhead of managing backups and restorations.
- Savings on bandwidth, CBTS will never back up the same data twice.
- 24x7x365 monitoring and management of customer primary backup.
- Management by CBTS certified professionals.
- Reporting tools provide oversight into all your data and backup performance.

CBTS Cloud Portfolio

Applications

CBTS develops and migrates secure cloud-native applications that are built for resiliency, scale, and quick time to market.

Application solutions

Platform

Managed cloud backup

Backup to CBTS high-availability robust data centers across North America or to the public cloud.

Did you know CBTS also offers backup assessments as a service?

During our backup assessment, CBTS experts gain an in-depth understanding of your business requirements and priorities that your backup plan should cover. Our process includes:

- Conducting staff interviews and developing backup requirements.
- Collecting, analyzing, and verifying IT environment data.
- Discussing best practices, covering strategic direction, applications, and processes.
- Compiling recommendations including a well-defined, strategic roadmap for data backup and restoration into a detailed report.
- CBTS is here to help with your migration and setup of a managed backup environment and provide all of the ongoing support.
