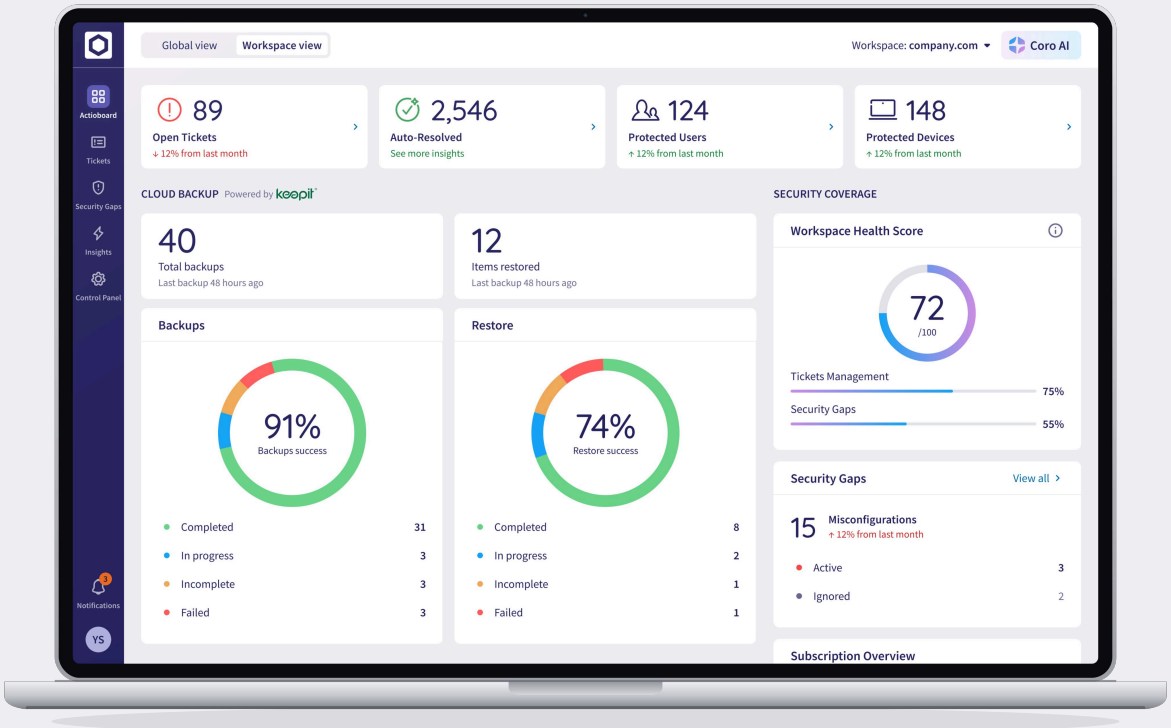
Cloud Backup

Powered by keepit

Cybersecurity Made Easy

Coro Cloud Backup provides next-level SaaS data protection against accidental deletion, ransomware, malicious activity, and service disruptions. Independent, immutable backups keep data across Microsoft 365, Google Workspace, and other supported SaaS applications separate from production environments, preventing protected files from being changed or deleted. Powerful search and intelligent restore options enable fast recovery, minimizing downtime, ensuring compliance with local regulations, and maintaining data access and business continuity.

Unified Cybersecurity



Cloud Backup is part of a unified and powerful cybersecurity platform.

- One dashboard
- One endpoint agent
- One AI-driven data engine
- No integration
- No headaches

Coro is designed to make your life easier; A single security platform with all the capabilities you need.

Disclaimer: Coro Cloud Backup is currently available in early access and is not yet fully integrated into the Coro platform. Customers who activate Cloud Backup during early access should expect the setup, management, and overall user experience to change as integration progresses.

Key Functionalities

Immutable Backups by Design
Stores backups separately from production environments using an architecture designed to prevent protected data from being changed or deleted

Proactive Monitoring
Uses Data Protection and Anomaly Detection dashboards to monitor backup integrity and health and identify potential data risks

Flexible Retention Plans
Offers one-year or unlimited retention, with customizable retention periods for up to 99 years

Intelligent Restore Options
Restores individual objects or complete datasets using granular and bulk recovery options for fast, precise restoration

Data Sovereignty
Keeps protected data in the customer's selected region using Keepit-owned data centers across seven countries and three continents

Compliance and Reporting
Provides reporting and audit capabilities for documenting data-protection activities and demonstrating compliance

Instant Search
Uses powerful search and filters to quickly locate emails, documents, and other data for one-click recovery or secure sharing

Advanced Data Encryption
Uses AES encryption to protect data in transit and at rest, with traffic exchanged directly with workload providers through major internet exchanges

Automated SaaS Backups
Automatically captures protected SaaS data on a recurring schedule, reducing manual effort and keeping data current

18 SaaS Applications, One Backup Solution

Microsoft 365 | Microsoft Entra ID | Google Workspace | Okta | Jira | Confluence | Github | Microsoft Azure DevOps | Salesforce

Autodesk Forma | Monday.com | Miro | DocuSign | BambooHR | Zendesk | Jira Service Managment | Microsoft Power Platform | Microsoft Dynamics 365

Why Coro Cloud Backup?

One Platform, Unified Visibility
Extend Coro's unified workspace security with SaaS backup and restore

Minimize Business Disruption
Keep essential operations running following data loss

Reduce Financial Exposure
Limit the cost and impact of prolonged downtime

Cybersecurity for small IT teams with big responsibilities

About Coro

Coro, the leading cybersecurity platform for small and mid-size businesses, empowers organizations to easily defend against malware, ransomware, phishing, data leakage, network threats, insider threats and email threats across devices, users, networks and cloud applications. Coro's platform automatically detects and remediates the many security threats that today's distributed businesses face, without IT teams having to worry, investigate, or fix issues themselves. Coro has been named a leader in G2-Grid for EDR/MDR, received Triple-A grading (AAA) from SE LABS, and was named to Deloitte's Fast 500.
