

Data Protection as a Service

Full protection and fast access to your critical data.

DSM Data Protection services backup and restore data crucial to your business stability. DSM protects your data wherever you store it: on-site, off-site, in the private or public cloud, or in multi-cloud environments. For systems of all sizes, DSM ensures ready, reliable access to your essential data.

“DSM was integral in being able to actually save our business when we had a fire and our building burned down. We would have lost our business without DSM. They came to our rescue.”

Louis Campano
Executive Vice President
Jerue

You're protected when:

- Compliance requirements mandate high backup retention.
- You need to restore a single database on a database server.
- You need to restore a file from a number of days, weeks, or months ago
- You accidentally delete data from a server

Customized protection

DSM's data protection software features the breadth of capabilities to protect any system, from simple to enterprise. DSM manages the core servers and systems, and provides your company access to a self-service portal.

Assistance from start to finish

DSM will evaluate your system and data, propose an optimal solution for your needs and budget, then help implement it. For our Managed Services clients, we will also manage your Data Protection, freeing you to focus on your business.

Confidence in your data

Our fast, reliable tests of your recovery capabilities—which can be conducted by us or by you—help ensure that we can recover your critical data before you need it.
