

Outsourcing Your Infrastructure

Most organizations want the benefits and security of a true enterprise-class data center but can't invest the kind of capital it takes to build, manage and maintain one. By partnering with an enterprise-class colocation and cloud provider like DartPoints, you get access to the latest and greatest technology solutions needed to keep your mission-critical data and systems safe, secure and always available.

SCALABILITY

Whether floor space, power, cooling or Internet bandwidth, you can never adequately plan for future or special event needs. Leveraging an enterprise-class data center allows your IT infrastructure to keep up with your business without being held back by typical time and capital costs roadblocks

IT EXPERTISE

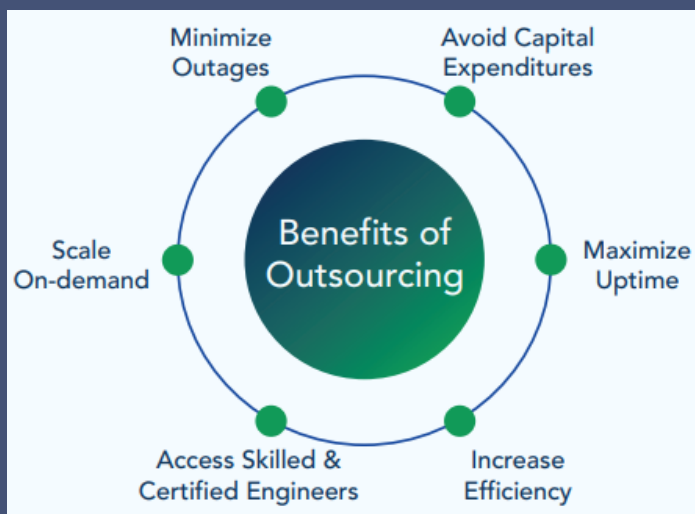

Your employees are more valuable to you when they are focused on revenue generating initiatives. Instead of investing their energy in your behind-the-scenes infrastructure, outsource your data center and your team can focus on projects that will bring you profit instead of draining your resources

RELIABILITY

Very few businesses can afford to deploy the power, cooling, network and personnel redundancies necessary to provide the uptime demanded by today's always online world. Outsourcing your data center environment provides you the comfort of knowing you have done all you can do to maximize your system uptime.

REDUCED COST

You want the benefits of a fully secure and compliant data center, but the cost of building and maintaining one adds up quickly. The technical building specs are stringent, and the technology you need to maintain uninterrupted power, internet connectivity and a carefully-controlled climate doesn't come cheap. By working with DartPoints, you can have access to all the technology, power and security you will ever need without any upfront capital cost.
