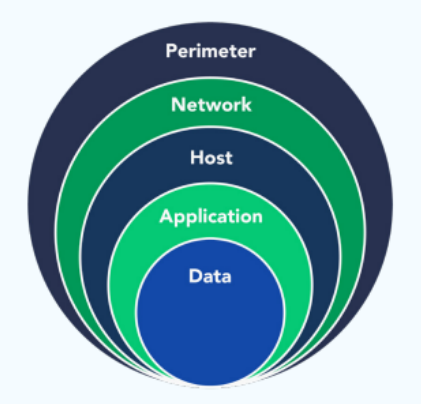
Defense-In-Depth Security

DartPoints
EMPOWERING POSSIBILITY.

Cyberattacks are constantly evolving, finding new and more complex ways to avoid detection and exploit your network. In order to properly prevent attacks, detect threats and recovery from breaches, experts recommend using multiple redundant types of security in conjunction, layering them together to build a security posture that is stronger than the sum of its parts.



Why DartPoints?

SAVE MONEY
Hiring dedicated security personnel is expensive. DartPoints' services provide the expertise you need but at a much lower price point.

ELIMINATE PAIN OF USE
Implementing, managing and monitoring security technologies can take a lot of time. DartPoints takes that burden off your plate.

PROTECT YOUR COMPANY
A strong security posture is key in preserving your data, client base and reputation.

Services

SECURITY BASICS
This is comprised of antivirus software, basic firewalls and security patching and maintenance. DartPoints can help you choose the system that is best for you and can help you manage patching and maintenance.

NEXT GENERATION FIREWALL
The Next Gen Firewall offers application-level inspection, traffic blocking and filtering and an integrated intrusion prevention. Combined with stateful inspection, this allows for a more stable and secure network.

- 27 Gbps Firewall
- 13 Gbps IPSEC
- 900 Mbps SSL VPN
- 1.8 Gbps NGFW Throughput
- 100 Remote Access VPN users
- 24/7/365 firewall management & performance monitoring

MANAGED SECURITY
Security Information and Event Management (SIEM) combines with a Security Operations Center (SOC) to help you detect and remediate any malicious attacks months before you'd find them on your own.

- 24/7/365 monitoring by ISO 27001-certified SOC
- 400-day hot/warm/cold log retention
- Agent-based IDS
- Syslog & agent-based event monitoring
- Alerts based on severity
