

Dataprise vCIO Fact Sheet

Gain an edge. Dataprise's IT Strategic Consulting delivers on-demand IT executives that architect, implement, and manage your technology.

The COVID era has elevated the role of the Chief Information Officer (CIO) to new heights, with senior executives engaging with IT leaders for strategic input like never before. These organizations understand that the alignment of business strategy and technology planning is critical to ensure continuity and to meet core objectives.

Dataprise's Virtual CIO Services are rooted in aligning your business priorities with your technological investments to optimize business success. No matter your company size, a Dataprise vCIO ensures that your IT spending delivers on your vision and business goals.

Experience and Expertise

A Dataprise vCIO is an expert able to elicit requirements across all aspects of your business to match business need with technological processes and solutions. Using decades of experience and certified technological knowledge, our vCIO's will not only use impact technology as an enabler to drive new ideas, products and solutions for your business, but will go beyond to accelerate your business development, revenue generation, and the effectiveness of your workforce.

Scaled to You

CIOs with a proven track record are expensive, usually prohibitively so for many businesses. Avoid the time and expense of trying to identify, attract, afford, and retain a qualified CIO full-time by working with a qualified and experienced IT executive at a fraction of the cost for that caliber of talent.

With Dataprise, you get access to an expert on your schedule, a valuable third-party perspective on your IT, and a team of technical resources assisting the vCIO, all backed by a trusted-brand with twenty-five years of experience as a market leader in IT.

Our Expertise Includes

- Deep analysis of your technological environment and how it relates to all aspects of your business.
- Institution of management strategies and development of risk planning.
- Technological research and recommendations for your specific business goals.
- Formal business planning, roadmap development, and budgeting.
- Development of business continuity, disaster recovery, and operational plans.
- Application of industry knowledge to ensure your business is fully aligned with your strategic vision, operational objectives, and compliant with laws and regulations (e.g., HIPAA, FISMA, PCI).
- Perform technology cost analysis to outline the return on investment and the total cost of ownership of a solution/service.
- Facilitate all aspects of vendor selection/engagement and negotiation.

Our Approach

Knowledge Transfer:

Stakeholder interviews and business-aligned assessments are the first steps to determine your priorities and objectives.

Strategy:

Once we've determined the engagement process (majority of clients engage for 32 – 64 hours a month) and a high level plan, we focus on solution building that drives progress towards your goals on an ongoing basis.

Assessments:

This forms the basis of an iterative model, which allows us to ensure that we are agile and flexible to change with a customer's objective requirements and to ensure the technology deployed for a solution is the most efficient and cost effective.

Our Services:

- Application selection
- Business impact analysis
- Cloud strategy
- Compliance tracking and reporting
- Roadmap creation and maintenance
- Disaster recovery and business continuity planning
- Disaster recovery maturity analysis
- Budgeting, forecasting and ROI analysis
- IT project management
- IT strategy
