

ServiceFabricTM Connect

Data Sheet

ServiceFabric™ Connect

Overview

Digital Realty’s ServiceFabric™ is a global service delivery platform that provides a seamless, on-demand suite of wide-ranging services. ServiceFabric™ Connect is the initial service, which provides management, visibility and connectivity to global cloud, network providers and business partners. This service seamlessly interconnects workflow participants, applications, multiple clouds and ecosystems to support the exploding volume of data and interactive traffic of digital business workflows and use cases.

Connectivity Use Cases

SaaS Software as a Service PoPs Points of Presence NOC Network Operations Center

Figure 1. PlatformDIGITAL® ServiceFabric™ Connect - Connectivity Use Cases

Key Attributes*

Connected

Broad ecosystem of carrier & cloud neutral service providers, suppliers and business partners

Compliant

Security controls and access logging for data compliance

Secure

Network segmentation and private backbone ensure security

Extensible

Scale deployments up and out with flexible consumption models

Resilient

Fully redundant hardware, power distribution, 99.9% single port availability, 100% redundant port availability, network diversity and 24x7 NOC/Global Command Center Operations

Performant

Purpose built for low latency and high throughput

Key Benefits

- ✓ One port to connect to Anyone, Anywhere, at Anytime, through a global platform
- ✓ “On-Ramp” to new services and innovation, quickly connect to new services provided by cloud, SaaS and partners
- ✓ Integrated security through network segmentation and private connections that bypass the public Internet
- ✓ Bandwidth on-demand, simply and rapidly provision any-to-any connectivity to anywhere at any time
- ✓ Flexible billing, scaled up and down bandwidth based on your business needs with no long-term commitments

At-a-Glance

Purpose-built product for cost effective interconnections to global data centers, cloud service providers, network service providers and business partners with a single secure interface

*All Key Attributes and anticipated benefits above are subject to the disclaimers in this document and the ServiceFabric terms and conditions published and agreed to by Digital Realty.

ServiceFabric™ Connect

How it Works

Deployed in PlatformDIGITAL™’s global campus facilities, a ServiceFabric™ Connect Port allows the customer to establish numerous Layer 2 or Layer 3 virtual private connections to multiple cloud service providers, network providers, SaaS providers and other providers from a single interface. Interconnections support both Metro (metropolitan area) and Intercity (between distant locations) connections.

The ServiceFabric™ Connect Virtual Router (vRouter) allows customers to connect via Layer 3. The vRouter joins two or more independent connection services into a single routing domain, providing connectivity between all of the connections attached to the vRouter.

ServiceFabric™ Connect connections join two or more locations together within a metropolitan area or between distant locations using Digital Realty’s global high-speed backbone.

Orchestration Layer

Interface

Integrated Services

Interface
Interact with the platform via the standard portal or program-matically via API. API interface allows integration into existing workflows and orchestration tools.

Advanced Services
New service offerings, such as Network Function Virtualization (NFV), decouple software function from hardware, accelerating delivery of network functions and applications.

Connection

Connectivity
Flexible connectivity options allow connections from any-to-any, and any-to-many. Reach spans from Metro to Intercity with connectivity targets including self and clouds.

Ecosystem

Provider Integration
An open fabric of fabrics, ServiceFabric™ can orchestrate other platforms and fabrics. At launch, integration exists with Megaport.
