At EPIC iO, we take pride in being the premier provider of connectivity solutions, offering not only the best-in-class technology but also unparalleled customer service. With over two decades of experience, we have established ourselves as the Gold Standard in wireless connectivity.

Our comprehensive suite of connectivity solutions is built on our DeepInsights for Connectivity platform. With DeepInsights, you gain full visibility and control over your wireless network to optimize performance, reduce costs, and make data-driven decisions like never before.

Our Gold Standard Wireless solutions include:

- **Rapid Deployment:** Swift installation and activation of your connectivity solutions to keep your business running smoothly.
- **Personalized Carrier Selection:** We choose the best carrier for each location, ensuring and cost-efficiency the strongest connection.
- **Dual SIM Deployment:** Redundancy and reliability with dual SIM cards in every deployment.
- **Specialized Data Management:** Proactive monitoring and management to prevent overages and unexpected costs.
- **Cross-Carrier Data Pooling:** Efficient data utilization across multiple carriers for cost savings.
- **\$0 CapEx Options:** Flexible financing options to suit your budgetary constraints.

Connectivity Solutions:

Primary Connectivity

- Leverage high-speed 4G/5G wireless connectivity as a primary network solution.
- Quick and easy setup ensures flexibility and scalability to meet your unique requirements.

Failover

- Ensure uninterrupted operations with automatic failover to 4G/5G wireless networks in case of primary network outages.
- Minimize downtime and data loss with seamless transition between primary and backup connections.

Starlink

- Deliver reliable high-speed satellite internet to remote locations with Starlink's Priority Business service, ensuring consistent connectivity even in underserved areas.
- Ensure uninterrupted operations with Starlink's superior priority service, offering enhanced speeds and reliability, even during peak usage times in remote environments.

POTS Replacement

- Transition from legacy Plain Old Telephone Service (POTS) to modern, cost-effective 4G/5G solutions.
- Benefit from industry-leading rapid installation: self-installation available in 7-10 days or EPIC iO's professional installation in 2-3 weeks for standard deployment.

Private Cellular Networks

- Create your own private LTE networks for enhanced security, coverage, and control over your wireless infrastructure.
- Tailored solutions for industries where data privacy and network segmentation are paramount.

Bonded Connectivity

- Combine multiple wireless connections for increased bandwidth and reliability.
- Achieve higher data speeds and network redundancy to support bandwidth-intensive applications.

Wireless WAN

- Harness the power of 4G/5G wireless as your primary wide area network (WAN) solution.
- Ideal for locations where traditional wired connections are impractical or costly.

Fixed Wireless Access

- Enable high-speed internet access in underserved or remote areas using fixed wireless technology.
- Bridge the digital divide and expand your network footprint.
