WirelessWindow

At EPIC iO, we take pride in being the premier provider of connectivity solutions, offering not only the best-in-class technology but also unparalleled customer service. With over two decades of experience, we have established ourselves as the Gold Standard in wireless connectivity.

Our **WirelessWindow** platform gives EPIC iO the edge in managing your wireless usage and performance—helping prevent overages and optimize efficiency. Managing 50 or more connections? We offer dedicated access to your team, empowering you to customize and streamline your wireless management with ease.

The Gold Standard in Wireless

Delivering unparalleled reliability, performance, and control—our wireless solutions set the benchmark for enterprise connectivity.

- **WirelessWindow:** Our powerful enterprise-grade platform provides complete SIM oversight, proactive anomaly detection, real-time alerts, usage forecasting, and the assurance of zero overages.
- **Next Day Connectivity:** Experience rapid deployment with next-day installation and activation, ensuring minimal downtime and uninterrupted business operations.
- **Best Carrier Selection:** We select the optimal carrier for each location, maximizing coverage and cost efficiency with every connection.
- **Dual SIM Deployment:** Every solution includes dual SIMs to provide built-in redundancy, enhancing reliability and reducing the risk of downtime.
- **Enterprise Account Management:** Proactive account oversight designed to optimize usage, control costs, and eliminate surprise overages.
- **Cross-Carrier Data Pooling:** Unlock smarter data usage with seamless pooling across multiple carriers—reducing waste and lowering costs.
- **Direct Carrier Sim:** Direct-to-carrier SIM access for faster provisioning, simplified management, and a streamlined support experience.
- **Engineered Outcomes:** Connectivity designed with your goals in mind—delivering tailored solutions that align with your operational and business outcomes.

Connectivity Solutions:

Wireless WAN for Primary

- Harness the power of 4G/5G wireless as your primary wide area network (WAN) solution.
- Ideal for locations where traditional wired connections are impractical or costly.

Fixed Wireless WAN

- Enable high-speed internet access in underserved or remote areas using fixed wireless technology.
- Bridge the digital divide and expand your network footprint.

Failover

- Ensure uninterrupted operations with automatic failover to 4G/5G wireless networks in case of primary network outages.
- Minimize downtime and data loss with seamless transition between primary and backup connections.

Private Cellular Networks

- Create your own private LTE networks for enhanced security, coverage, and control over your wireless infrastructure.
- Tailored solutions for industries where data privacy and network segmentation are paramount.

Starlink

- Deliver reliable high-speed satellite internet to remote locations with Starlink's Priority Business service, ensuring consistent connectivity even in underserved areas.
- Ensure uninterrupted operations with Starlink's superior priority service, offering enhanced speeds and reliability, even during peak usage times in remote environments

POTS Replacement

- Transition from legacy Plain Old Telephone Service (POTS) to modern, cost-effective 4G/5G solutions.
- Benefit from industry-leading rapid installation: self-installation available in 7-10 days or EPIC iO's professional installation in 2-3 weeks for standard deployment.

Bonded Connectivity

- Combine multiple wireless connections for increased bandwidth and reliability.
- Achieve higher data speeds and network redundancy to support bandwidth-intensive applications.

Temporary Connectivity

- Reliable high-speed internet for temporary project sites where wired connectivity is unavailable or long-term contracts aren't practical. Ideal for construction and industries with mobile or horterterm connectivity needs

Why We're Different - WirelessWindow

Managing a large number of SIM cards and devices across multiple locations and carriers can be incredibly complex. It's hard to track where each SIM is deployed, monitor data usage per device, and control costs across different networks. This complexity often results in service disruptions, security risks, increased expenses, and wasted employee time.

WirelessWindow simplifies this chaos with a unified platform that gives businesses complete visibility and control over all their wireless connectivity — in one place.
