

WE ARE THE
BUSINESS-ONLY
FIBER NETWORK.

everstream[®]
FASTER FIBER. BETTER BUSINESS.[®]

HIGH-CAPACITY, LOW-LATENCY CONNECTIVITY

With more than 27,000 route miles of fiber,
we have field offices with local inside and outside plant,
sales and operations teams in cities across our footprint.

WHO WE ARE

At Everstream, we understand that for business, bandwidth is oxygen. When it's there, no one thinks about it. But when it's gone, getting it back becomes your only focus.

That's why we built the Business-Only Fiber Network.

Our locally owned and managed network disrupts the big telecom status quo by only serving business. With more than 27,000 route miles of fiber across 10 states, we deliver high-capacity, low-latency connections and symmetric upload and download speeds up to 100 Gigabits per second (Gbps).

But providing a network is only part of it.

We form real relationships with our customers. We listen, engage and dedicate ourselves to helping you succeed today and into the future.

We provide expertise, not excuses.

From our corporate offices in Cleveland, Ohio, to our field offices and operations teams throughout our footprint, we all follow the motto **“Do what you say you will do.”** It's at the center of the culture we've built and it's what drives our team members to put forth the effort, honor their commitments and deliver an unrivaled customer experience.

Whether you have just begun to research network service providers for your business or are looking to improve your existing connection, be sure to think about what you really need from your network provider. If reliability, speed and scale are essential to your business's success, Everstream is the right choice for you. And if you think connectivity should include expert service before, during and after the sale from a team with years of technical experience, we invite you to join us.

Discover the Everstream Difference.

Find out why we are the Business-Only Fiber Network.

A STRONG NETWORK IS THE FOUNDATION FOR GROWTH.

Everstream was founded because we believe business deserves better. We've built our network — and company — to support that premise.

Across our rapidly expanding footprint, our 100% all-fiber network delivers fast and reliable connectivity from the core to the curb. It is the backbone upon which all our solutions are built. Purpose-built to deliver connectivity to enterprises and organizations with complex requirements, it can scale easily to meet your growing bandwidth needs.

Whether you require a private, high-speed fiber connection, network security and redundancy, or real-time data replication, we understand that performance and reliability are essential — **and we make it our job to deliver it.**

WHY WE'RE DIFFERENT

CONNECTIVITY

Everstream has raised the bar for business connectivity, delivering a Business-Only Fiber Network with speeds up to 100 Gbps available across our footprint. By using high-capacity switches, Everstream ensures your network can scale quickly and easily.

BANDWIDTH BURSTING

Our no-charge bandwidth bursting* delivers the flexibility of on-demand bandwidth when your needs increase temporarily. With no data caps or network slowdowns, your business continues to operate at peak performance.

NETWORK DIVERSITY

The combination of Everstream's network architecture, engineering expertise and equipment deployment delivers four critical types of diversity: network, route, equipment and point-of-entry — eliminating the need for multiple carriers.

DIRECT PEERING

Our direct peering connections bypass the public internet to provide direct access to more than 40 CDNs and ISPs, such as AWS and Salesforce — reducing latency, maximizing bandwidth and improving overall network performance.

LOW LATENCY

Our average network latency is less than 5 milliseconds[†], approximately 90% less than other providers. A low-latency connection is critical when business operations demand real-time applications and data replication.

SERVICE DELIVERY

Our Service Delivery Managers act as a customer's primary point of contact throughout implementation — managing the process and keeping you informed until your service is up and running.

TECHNICAL SUPPORT

Our two Midwest-based Network Operations Centers are staffed by highly trained engineers, who answer 98% of incoming calls within 60 seconds and serve as a single point of contact to deliver the support you need.

*Bandwidth bursting allows for occasional bandwidth increases at no additional charge.

†Latency is measured in market / in region from customer location to internet gateway or between in market customer locations.

WHAT DO YOU WANT TO DO WITH YOUR NETWORK?

When you partner with Everstream, we start by learning about your business, determining what you want to accomplish and truly understanding what it is you want to do with your network.

And if you're not sure exactly what your business needs, we can talk about that, too. **Our experienced team will help you find the solution that's right for your business** so you can get the most from your IT investments.

INTERNET

Everstream offers dedicated, symmetrical and intelligent fiber-based internet solutions that leverage network automation to direct traffic on the most efficient path, delivering invaluable uptime and performance.

WIDE AREA NETWORK

Our Ethernet services are designed and delivered according to your requirements. With two completely diverse networks over which to carry traffic, Everstream offers maximum design flexibility — with creative solutions that the competition is not able or willing to do — as well as configuration and diversity options.

DATA CENTER CONNECTIVITY

Everstream's Business-Only Fiber Network is available in 47 data center partner locations across our 10-state footprint and is directly peered with all major cloud platforms. Connectivity is available in Tier 1, 2, 3 and 4 data center facilities.

DARK FIBER

Our build-to-suit Dark Fiber connectivity provides a strand of fiber, giving you full ownership to configure, light, manage and control your network. This option is best suited for customers with extremely high-bandwidth, low-latency requirements and in-house teams to support and manage the connection.

WAVELENGTHS

We offer Dedicated Dense Wavelength Division Multiplexing (D-DWDM) and Managed Wave connections. Our Wave options are available for businesses with extremely high-bandwidth, low-latency requirements and a team to configure and manage the network.

“Show up. Put forth the effort.
Honor your commitments.
For us, **it’s really that simple.**”

Everstream believes that its successes are rooted in the basic premise that our customers can't be happy if our employees aren't happy. CEO Brett Lindsey has championed Everstream's **“Do what you say you will do”** culture — a corporate value and company motto that starts at the top.
