

Whitepaper

Simplifying Global Networks

Version 1.0

Welcome to the intelligent internet

SD WAN

Move to the cloud with confidence

Expereo SD-WAN is a fully managed network solution, providing your organization with high performance, flexible Internet connectivity.

We handle end-to-end design, deployment, and maintenance of SD-WAN tailored to your needs.

Benefit from Expereo's 19 years of experience in delivering network connectivity, virtual private network services, and demystifying the Internet puzzle.

We consult, design, and deliver a full SD-WAN network that best fits to your business' needs.

**Enable Your
Network**

**Enable Cloud
Connectivity**

**Reduce Cost and
Reliance on MPLS**

GLOBAL SD WAN CONNECTIVITY

Simple, Optimized, and Secure

- Connectivity
- Design
- Consultancy
- Deployment
- Field services
- Day-to-day management

SD WAN COMPARISON

Why SD-WAN with Expereo

	Expereo	MPLS	Global carriers	SD-WAN vendors
Cost effective & scalable As enterprises move to the Cloud and business grows, more bandwidth is required. Scale up your bandwidth globally at a cost effective rate, with SD-WAN.	✓	✗	✓	✓
Internet Globally Easily set up broadband or DIA services around the world to support SD-WAN, back up, or diversity requirements.	✓	✗	✗	✗
Prioritize & optimize Prioritize data between critical and noncritical traffic, plus optimize application performance between locations.	✓	✓	✓	✓
Managed service Get fully managed, end-to-end services for your network such as sourcing, design, delivery, and support for SD-WAN.	✓	✓	✓	✗
Options Overlay existing networks with no hassle and handpick every component of your SD-WAN, from carriers, to vendors, and Internet access technology.	✓	✗	✗	✗

"Our primary goal, to reduce costs, we have clearly achieved"

"Our secondary goal, not to lose any existing functionality, was exceeded, because we've increased our functionality, flexibility, and agility within the network using Cloud and SaaS adoption."

Ted Holland
Director, Global IT Infrastructure & Operations.

GLOBAL INTERNET

Get the performance you need for every location in your network

Since 2004, we have built and actively manage a global network of suppliers in more than 190 countries – ensuring you get the best connectivity anywhere, anytime.

The best solution for your needs

Broadband and dedicated services

Broadband from 1MB to 1GB, and Dedicated from 1MB to 10GB.

Cloud optimization

Optimized traffic to Cloud and SaaS applications.

BYO connectivity

Managed services for your existing connectivity portfolio.

CLOUD ACCELERATION

Optimize your traffic with Expereo's Global Footprint

Expereo offers a direct "on-net" circuit to Cloud Acceleration Hubs spread around the globe. Our Cloud Acceleration service (XCA) is designed to maximize application performance and availability.

Ensures internet service availability and maximum performance:

- Automatically chooses the best performing path.
- Avoid all congestion, packet loss, and complex failures.
- Make decisions in milliseconds, converging faster than BGP alone.

Optimize traffic to cloud and SaaS applications

Any application is only as good as the end-user experience. We deliver the best performance for all applications by selecting the most reliable paths to every destination.

Full network control

Our online monitoring and reporting portal provides real-time visibility of your accelerated application performance. If something goes wrong, Expereo's 24/7 pro-active support will immediately identify and resolve the issue.

Smart routing decisions

Your destination IPs are actively probed for performance metrics including packet loss, latency, historical reliability, throughput, and peering capacity. The best routing paths are continually selected in real-time.

Welcome to the intelligent internet

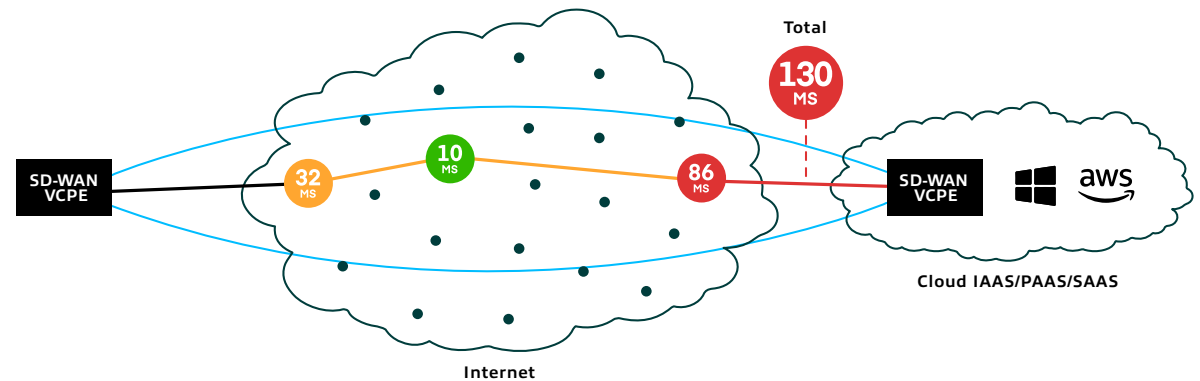

CLOUD ACCELERATION

Use case: Cloud Acceleration + SD-WAN

Combining both our Cloud Acceleration and SD-WAN solution ensures the best of circuit and application performance.

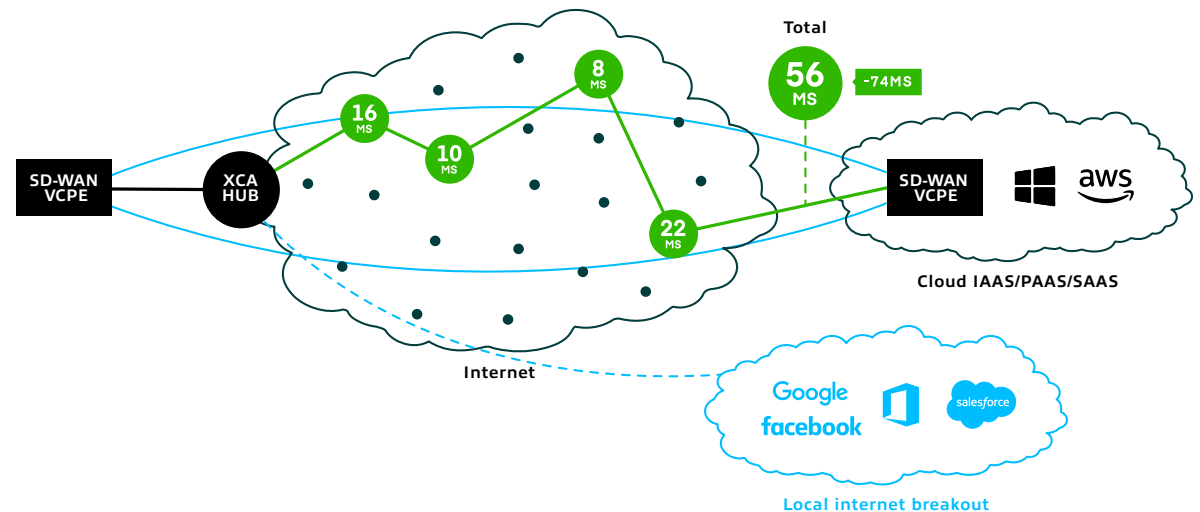

The internet

The Internet consists of 790,000+ individual networks with a huge amount of data in flux at any given time, vulnerable to congestion and poor performance.

Optimized configuration: SD-WAN + Cloud Acceleration

Cloud Acceleration executes thousands of tests per minute and makes real-time decisions to select the best, fastest path available for your data. By enhancing the underlay path, we substantially help with SD-WAN overlay performance.

GLOBAL REACH

Global Cloud Acceleration Hubs

Realize your future faster with Expereo's world-leading IP connectivity solutions
