

Network Protect

Protect your critical infrastructure and maintain performance with always-on network defense at the edge.

Defense without detours

- ✓ Largest DDoS mitigation capacity
- ✓ No scrubbing center performance impacts
- ✓ No hardware to buy or maintain

Protecting your network infrastructure no longer means sacrificing speed or managing complex hardware.

Unmatched Mitigation Capacity

- Absorb volumetric and protocol-specific attacks backed by Fastly's global edge network capacity nearly 21 times larger than the biggest attack on record.

Always-on Defense at Full Speed

- Inspect and filter traffic directly at the edge without sacrificing performance by routing through distant scrubbing centers.

Stateless Traffic Filtering and Steering:

- Allow or block connections based on connection state and route traffic efficiently to your origin over GRE.

168%

YoY growth in Network-layer DDoS attacks

Automatic Scaling

- Deploy a fully software-defined edge defense that scales as needed with no physical hardware to buy, maintain, or replace.

Granular Control and Full Visibility

- Utilize simple tools to build ACLs and network policies, automate updates via API, and export 100% of your network logs to your existing monitoring tools.
