

Fastly Secondary DNS

Fastly DNS is a managed authoritative secondary DNS service that helps keep websites online and running smoothly. It works alongside a customer's current primary DNS provider, automatically syncing DNS records through zone transfers and answering DNS requests through Fastly's global network.

Boost resilience and simplify vendor management

- ✓ Consolidate edge services with Fastly
- ✓ Improve resiliency with multi-vendor DNS
- ✓ Leverage Fastly network performance

Fastly DNS is an authoritative, managed secondary DNS service that helps organizations improve DNS resilience and consolidate vendors on the Fastly platform.

Today, Fastly DNS includes:

- Authoritative DNS query resolution from the Fastly network (Fastly answers DNS requests)
- Secondary DNS support via Zone Transfers, which requires that customers operate their own Primary DNS

Consolidate edge services with Fastly

One provider for content delivery, application security, compute, and DNS

Improve resiliency with multi-vendor DNS

Add Fastly as a secondary DNS provider, so a single vendor outage is less likely to take your domain offline

Leverage the performance of the Fastly network

Serve DNS responses from Fastly's global network, so lookups resolve faster no matter where your users are
