HGC COMPLETES ACQUISITION OF MACROVIEW

HGC acquired Macroview Telecom, a Hong Kong-based IT infrastructure and digital technology solutions provider that specialises in designing, implementing and managing corporate networking, cybersecurity and multi-cloud solutions.

The joining of Macroview will further accelerate the transformation of the HGC group into a leading ICT solution provider in the market. Both HGC and Macroview are striving to maintain and expand our relationships with all of our existing business partners to deliver technology solutions to our customers.

Andrew Kwok, CEO of HGC said, "Going forward, we will look for further expansion opportunities through organic growth, M&A and strategic partnerships to enhance our comprehensive suite of ICT solutions, extend our global presence, and reinforce our leading position in different regions."

ONE-STOP CLOUD MANAGEMENT PLATFORM

HGC ANYCLOUD

Cloud-computing adoption has been increasing rapidly in the recent years. It is reported that enterprise spending on cloud computing technologies continues to grow at a breakneck pace, topping \$150 billion in the first half of 2019*.

HGC AnyCloud offers a wide range of services across the cloud life cycle, from design, architecture to security, enabling customers to migrate their businesses from traditional hosting to cloud, which results in higher business efficiency.

HGC API HUB & A2P SMS FOR

REAL-TIME AND SECURE SMS DELIVERY

As the first service riding on HGC API Hub, HGC A2P SMS enables customers to deliver high quality SMS from applications to mobile users via a fast, convenient and secure process without requiring extensive investment.

With direct connections to 11 mobile operators worldwide and over 100 million active subscribers, HGC's A2P services guarantee a sustainable and high quality delivery of mission critical SMS traffic.

The solution manages and simplifies the complexity of messaging delivery such as interoperability, network and routing, spam filtering, as well as the critical business relationships.

ADAPTIVE SECURITY ARCHITECTURE

**CYBERSECURITY
FOR THE NEW
DIGITAL REALITY**

The cybersecurity and threat landscape becomes more challenging than the past. Therefore, the Adaptive Security Architecture (ASA) framework with CARTA continuous risk-based assessment and security engineering becomes crucial to enterprises and organizations' business continuity plans.

Macroview's data and analytic platform, PRISM, provides a data-driven and evidence-based security operation and orchestration environment, can be tightly integrated with the industry proven Security Blueprints of Technical Controls and Managed Security Services.

DIGITAL WORKPLACE

**NEXT-GENERATION
WORKPLACE
EXPERIENCE**

Successful and sustainable digital business not only requires a collaborative and innovative corporate culture, but also a digital workforce that is empowered with the latest productivity tools.

Macroview's Smart Workplace Platform, LUCAS, covers a range of fully integrated technologies, including cloud-first and AI-assisted office productivity applications, software defined secure heterogeneous network access and intelligent environmental controls, enabling enterprises to realize employees' smart and self-served experience.

HGC INTERNATIONAL TELCO-SERVICES MARKETPLACE

**DELIVERS ONE-STOP
ON-DEMAND SERVICES WORLDWIDE**

HGC continues to enrich the international telco-services marketplace by cooperating with carriers, OTT ecosystems and data centre, enabling customers and partners to elastically manage infrastructure and services through the centralised and intelligent platform.

The marketplace not only covers connectivity services, but also OTT solutions and API integration, in order to meet customers' international needs and extend service coverage to local and global market across network boundaries.

We will continue expanding our services to enable carrier-carrier interoperability to enhance our network provisioning, cloud connectivity and to provide secure and customised data-driven solutions.

RESHAPING THE TELECOM ECOSYSTEM

With digital communication technology advancing at an exponential pace, the telecoms industry is undergoing a transformation on a scale never witnessed before, where consumers are feeling the benefit in the form of improved customer service and intelligent solutions that simplify the user experience.

Therefore, HGC continues to prioritise our digital strategy, by launching strategic products like the International Telco-Services Marketplace and A2P SMS riding on HGC API's hub, in hope to enable every segment of the ecosystem to access online connectivity services that can reshape their network into a reliable business-enabler.

Mr. Ravindran Mahalingam

SVP,
International Business
of HGC

GLOBAL CONNECTIVITY REIMAGINED

Traditionally in the international telecom market, there have been different components and players. Now with the advent of the cloud, data centers have been added to the whole connectivity journey from one continent to another.

In that space, HGC has put a lot of emphasis into connecting data centers, linking our 30+ submarine cable investments together, laying an architecture of SDN and giving our customers multi-service enablement by subscribing to our network.

Going forward, HGC is going to place an orchestration layer that will allow our customers to move into higher layers within the cloud, joining all of the major data centers in Hong Kong and making available the HGC last-mile access network as the next phase of development.

Mr. Braham Singh

COO, IDC &
Associated Business of
HGC

UNLOCKING THE POWER OF DATA

Like power, connectivity is critical to any data center. Now to Asia where HGC is rapidly creating a connected data center cluster. The only way to stabilize so many mergers, acquisitions and builds is through similar automation and central command for operations and engineering.

Automated, Software Defined Networks like HGC's, transform a centralized NOC into the focal point for connectivity. Whether a rack, power, or Internet-related issue, one can monitor and act. The instant and external control of the network help improve server utilization efficiently, which results in operational savings.

TELCOS: YOUR SIGNIFICANT PARTNER IN DIGITAL ECONOMY

A business's ability to maintain competitive advantages over its competitors requires traditional industry boundaries and conventional business models disrupted. What sort of partners do you need to do to create your economic moats?

Digital experiences need connectivity, smart infrastructure, complex virtualization, etc, where an agile, entrepreneurial telco not only gives you a cost advantage, but also intangible assets. The ability to work with flexibility enables telcos to fit into different businesses' ecosystems and bring more partners to the economic moat.

Ms. Jacqueline Teo
