

We Are a Vendor-Agnostic SD-WAN MSP

Halo Global supports seven SD-WAN platforms globally and offers network design, comparison analysis, procurement, configuration, migration & activation, and post-deployment support. Halo's mission is to let a customer's needs drive the technology.

Why Choose SD-WAN?

SD-WAN provides your business:

- ✓ Best overall value and functionality
- ✓ Agility and speed when adding locations
- ✓ Redundancy, scalability, and fault tolerance
- ✓ Quality of experience for critical applications
- ✓ Simplification of operations
- ✓ Connectivity to other cloud-based solutions
- ✓ Dynamic bandwidth
- ✓ Cost-effective upgrades
- ✓ Support whenever you need it
- ✓ Application acceleration and optimization

Why Work With Us?

As your solutions partner, Halo Global:

- ✓ Is independent and can deliver multiple options
- ✓ Will learn your business structure and goals
- ✓ Will understand your IT infrastructure
- ✓ Will determine the optimal SD-WAN solution
- ✓ Tailors implementation plans with dedicated engineers and project managers
- ✓ Offers best-in-class support
- ✓ Becomes an integrated part of your organization's ecosystem

Your business requires a robust communications and data network for its mission-critical applications and services. Traditionally that has been accomplished by connecting private sites with MPLS or other private circuits. SD-WAN provides solutions that not only meet or exceed those offered by traditional WAN technologies, but it can provide additional capabilities such as redundancy, application acceleration, dynamic bandwidth to large cloud providers, and more. Map and scale to your business objectives faster and more effectively with SD-WAN.

No Risk to Your Business

Halo Global gives a business the flexibility of moving between solutions if a vendor ends up not being the right fit. No longer should customers be held hostage by carriers or vendors after the selection process. When a customer signs with Halo, they can rip and replace a solution at any time at no cost.

Solutions

- Talari
- Versa
- 128T
- VeloCloud
- CloudGenix
- Viptela
- Meraki

Quality of Experience

SD-WAN solutions can provide prioritization to the mission-critical applications your business demands. Typically providers choose the best circuit based on real-time statistics – giving priority to video, voice, and other business applications. SD-WAN solutions optimize the traffic – reducing overall latency, jitter, and response times – and accelerate the applications themselves.

Redundancy

SD-WAN solutions can combine your MPLS and internet connections so they don't sit idle.

Project Management & Implementation

Converting to new network solutions is one of the toughest decisions for an enterprise leader. Halo understands the severity and importance of a thoroughly planned migration – ensuring availability of critical business applications through that migration.

Ongoing Support & Traffic Analysis

We provide a partnership approach to supporting a customer's WAN infrastructure. A problem is always ours to solve, and you'll never hear "It's not our problem."

Tailored Options for Your Business Needs

- ✓ Product selection & design only
- ✓ Product procurement
- ✓ Product training
- ✓ Configuration for short, medium, or long term. We start, train, and you finish, or we work start to finish.
- ✓ Installation & activation. We can dispatch technicians anywhere in the world to rack, stack, and activate.
- ✓ Post-support. 24/7/365 NOC monitoring and responding to alerts alongside and in support of you.
- ✓ Joint access to the solution

Our Belief

No longer should a customer be held hostage by the carriers that provide their WAN infrastructure connectivity or solutions.

Customers should have the flexibility in their networks to make decisions as their businesses change and their needs grow or shrink.
