

Krista

Meeting and Conversation Agents

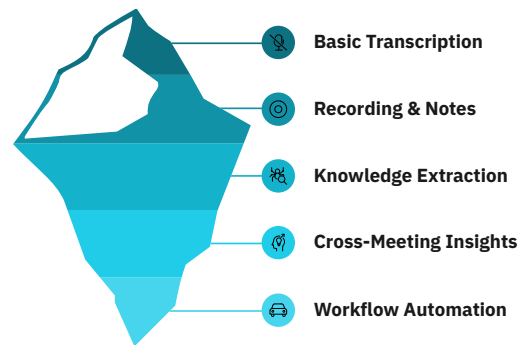

Krista turns your Teams meetings into an organization-wide knowledge base your whole company can search. Unlike notetakers that scope knowledge to a user account or a team workspace, Krista captures every authorized meeting into a shared enterprise brain governed by your O365 org chart.

Enterprise Knowledge Management

From Scattered Information to Structured Knowledge

Traditional meeting tools leave critical information scattered across personal accounts, workspace notes, and emails. Krista transforms this into a [structured, searchable knowledge base](#) that grows with your organization.

Meetings contain up to 80% of an organization's institutional knowledge, yet most of it is lost without proper capture and organization.

Solution Overview

Krista turns your Teams meetings into structured, searchable knowledge and real outcomes. Other notetakers record and summarize within a user account or team workspace. Krista identifies what matters (decisions, blockers, follow-ups) and writes it into an enterprise-wide knowledge base your teams can search, query, and act on.

Drive Accountability from Every Meeting

Track what was decided, who owns follow-ups, and when they're due. No more forgotten actions or unclear ownership.

Eliminate Manual Work

Krista eliminates the need for notetaking, writing recaps, or assigning tasks manually. Meetings end with action plans already in motion.

Improve Visibility Across Teams

Leaders and stakeholders can review meetings across teams, surfacing blockers, duplicate efforts, and alignment gaps.

Retain and Retrieve Institutional Knowledge

Teams don't rely on memory or sift through inboxes. Krista organizes conversations into a searchable memory that stays with the organization.

Deploy Securely with Enterprise Compliance

SOC 2 Type II certified, HIPAA compliant, and US-hosted. Meeting Agent deploys via user OAuth for immediate start. Conversation Agent deploys through your O365 admin console for governance, role-based access, and orchestration at the organizational level. Krista never trains AI models on customer meeting data.

Built for Enterprise

Krista isn't a personal meeting tool. She's [built for enterprise operations](#). She scales across departments, enforces access controls, and integrates with your tech stack.

Enterprise Capabilities

Supported Platforms

Microsoft Teams

Calendar Integration

Auto-joins scheduled Teams meetings via your Microsoft calendar

Transcription

High accuracy, speaker-attributed

Access Controls

Role-based access by user, team, or region (Conversation Agent)

Compliance

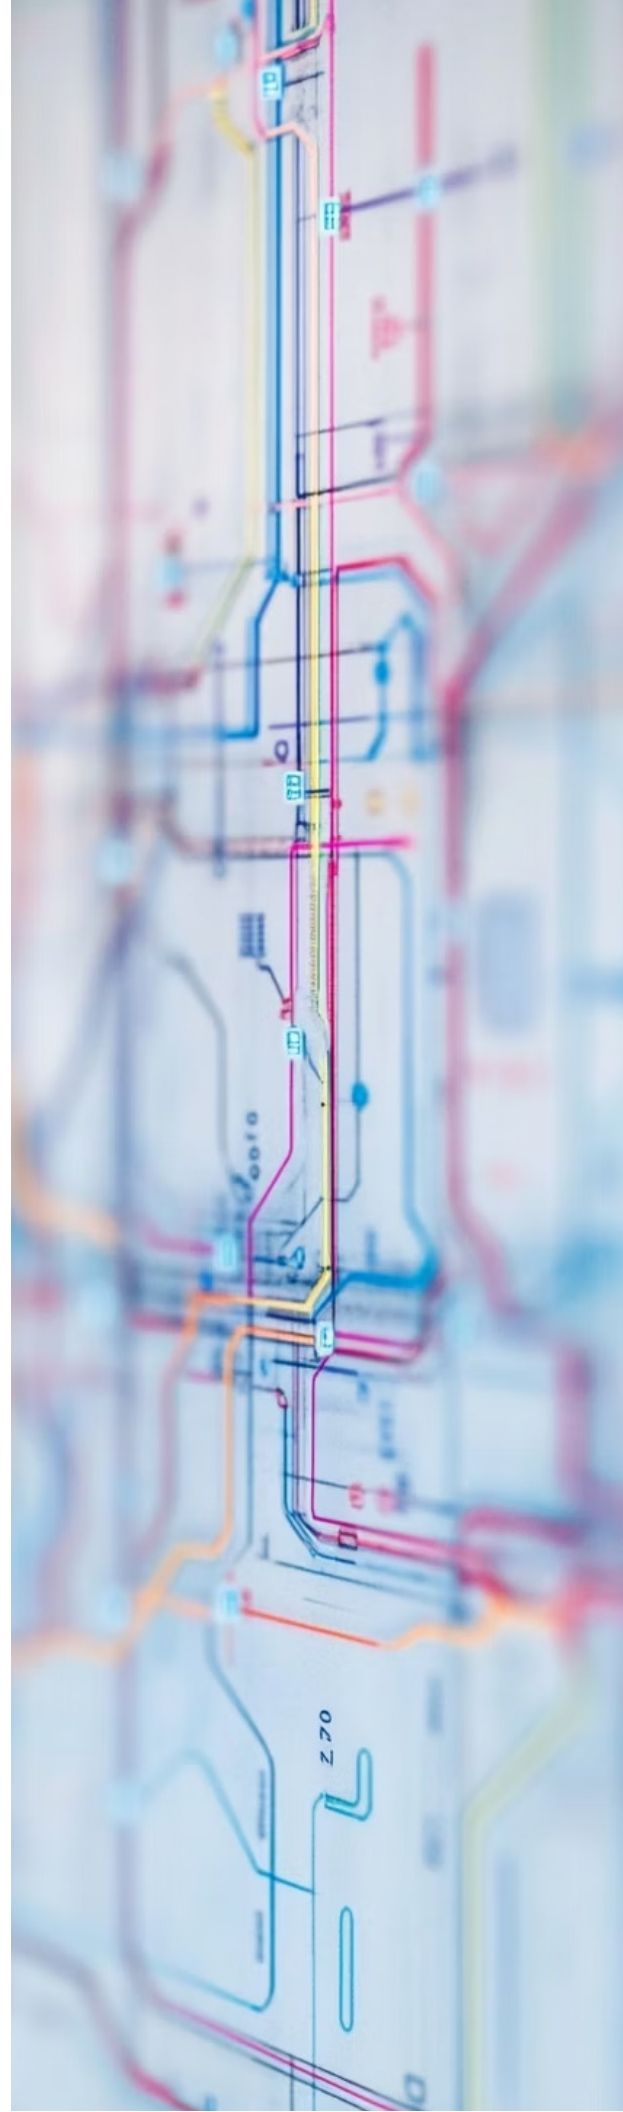

SOC 2 Type II certified and HIPAA compliant. US-hosted infrastructure. Krista never uses customer meeting data to train or fine-tune language models.

Deployment

Meeting Agent deploys via user OAuth with no admin involvement required. Conversation Agent deploys through your O365 admin console for governance, role-based access, and orchestration.

Support

Designed for team and enterprise tiers.

How Krista Meeting Agent Works

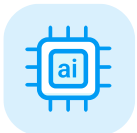

Sign up and connect your calendar

Sign up for free on krista.ai and authorize Meeting Agent on your own Microsoft account. Krista attends your scheduled Teams meetings with no admin involvement required to get started.

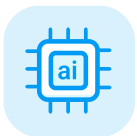

Attends Meetings and Gathers Speakers

Krista records meetings and transcribes them with speaker attribution, capturing exactly who said what. This creates clear, accountable records that preserve context and intent.

Identifies Key Insights

Krista detects important decisions, follow-ups, blockers, owners, and recurring themes during the meeting. This intelligence forms the foundation of enterprise understanding.

Sends Actionable Summaries

After the meeting, Krista sends summaries and action items directly to participants. Teams leave the meeting with clarity and next steps already in motion.

Builds Enterprise Knowledge

All meeting content is stored in a secure, centralized knowledge base. Krista indexes data by topic, project, and role for easy retrieval.

Enables Natural Language Search

Team members query Krista using everyday language. No training or syntax required. Krista understands and delivers insights instantly, even if you missed the meeting.

Controls Access by Role

Krista Conversation Agent enforces role-based permissions via your O365 org chart, so users only see meetings they are authorized to see. Leaders view patterns across teams without compromising sensitive information. IT configures access through the Microsoft admin console.

How Krista Compares

Capability	Otter.ai, Fireflies, Fathom	Krista Meeting Agent	Krista Conversation Agent
Transcribe meeting content and identify speakers	✓	✓	✓
Automatic summaries and action items via email	✓	✓	✓
Searchable enterprise brain across all meetings	✗	✓	✓
Records meeting when user is absent	✓	✓	✓
Privacy settings for internal, departmental, external	✗	✓	✓
Role-based enterprise search	✗	✗	✓
