

Disaster Recovery for Amazon Web Services

As an AWS Advanced Service Partner, Opti9 is committed to assisting you in every aspect of your cloud journey, and disaster recovery is no exception. When determining a solution that fits your business's needs, our experts evaluate your environment against over 400 AWS best practices, and our vast ecosystem of services to find a solution that seamlessly protects your data and applications.

The Opti9 Difference in DRaaS

Seamless AWS Integration: Our DRaaS solution is purpose-built for AWS environments, leveraging AWS native services as well as our third-party ISV partner, Arpio, for orchestration to seamlessly protect your data and applications. This native integration ensures high performance and efficiency in your disaster recovery operations.

Failover and Recovery: Opti9's offering automates the failover process, enabling rapid recovery of your systems and applications with minimal manual intervention and our SLAs ensure minimal downtime and maximum availability to ensure business continuity.

AWS Service Support: Our AWS DRaaS includes out-of-the-box replication & orchestration support for over 60 AWS Services, including EC2, EFS, EKS, Lambda, RDS, VPC configurations, WAF, Transit gateways, and many more.

Consumption Strategy: As part of our DRaaS solution, our experts will design a custom network + application consumption strategy ensuring users consume your apps from DR the same way they do from production.

Disaster Recovery: Opti9's experts work alongside your team to develop a disaster recovery plan tailored to meet your organization's specific redundancy level requirements and recovery time objectives.
