

Allgress Insight Risk Management Risk Register and Analysis Modules v6.1 Fast Facts

Is your company's risk management process cumbersome, time-consuming, inconsistent and subjective? Are you lacking a comprehensive picture of your risk posture for your executives?

By leveraging the Allgress Risk Modules, you can quickly articulate your risk posture. Leveraging existing information (assets, vulnerability scans, controls assessments, etc.), you are able to report on that information to reveal current risk status, previous milestones and "what-if" scenarios.

We provide you with the ability to measure multi-level quantitative and qualitative risks and identify key risks that should be considered in broader enterprise-wide operational risk models.

Leveraging the Allgress Risk Modules, you can:

- Score and prioritize risks based on the likelihood of threat occurrence, the degree of control implementation and the level of control effectiveness.
- Provide a repeatable, intuitive and unified workflow for managing, alerting on, mitigating and remediating risk.
- Provide actionable information for all enterprise stakeholders.
- Employ a common risk management schema, ensuring everyone in the organization ranks risk similarly; allowing business units to speak the same language.
- Gain the ability to associate risks to business units, vendors, compliance standards and internal policies.
- Provide a holistic "at a glance" risk-based views of your organization wide security posture.
- Translate operational and tactical risk data into meaningful information, allowing you to communicate to various levels of management via risk dashboards, trends, summary and detail reporting.
- Leverage a fully customizable scoring function for both inherent and residual risk.
- Provide segregation of authority, roles and authorization.
- Defend compliance budgets by demonstrating the history of security & compliance budgets in relation to risk over given periods.
