

Rogers Wholesale Solutions

Rogers Ethernet Services

Rogers Ethernet Services

Easily build private networks with secure, reliable, high-speed connections

With dedicated download speeds of up to 10 Gbps¹, Rogers Ethernet Services provide fast, scalable, and reliable bandwidth across our vast fibre and cable networks offering industry leading performance to support high-bandwidth applications.

Over 41,000 buildings are on-net over our fibre network and are MEF 9 and MEF 14 certified; and over 225,000 buildings are on-net over our cable footprint.

The following services are available

- › Ethernet private Line (EPL) – a point-to-point service to reliably connect offices or data centres.
- › Ethernet Virtual Private Line (EVPL) – a point-to-multipoint service to connect multi offices to one location, such as a data centre.

Bridged and fully or partially meshed network topologies are also available to meet your customers advanced business requirements.

Ethernet over Cable (EoC)

Ethernet over Cable (EoC) provides design flexibility that complements our last-mile fibre reach with private Layer 2 connectivity to the hundreds of thousands of sites across our cable footprint without traversing the internet.

EoC is built on DOCSIS3.1 and based on CableLabs Business Services over DOCSIS (BSoD), and offers both asymmetrical and symmetrical speeds up to 100 Mbps. This service expands Ethernet availability and makes it easy for carriers to build private networks.

Why choose Ethernet solutions from Rogers?

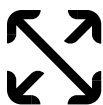

Affordability

Get higher bandwidth at a lower cost than legacy technology.

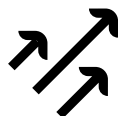

Performance

Get download speeds of up to 10 Gbps on our fibre backbone, which has multiple paths to bypass outages.

Reach

With more than 80,000 km of fibre routes, our network provides access to hundreds of thousands of fibre-ready locations.

Scalability

Add new services and increase bandwidth seamlessly—no new hardware or technician visits needed.

About Rogers Wholesale Solutions

With world-leading networks and connectivity solutions, Rogers is your connection in Canada

The Rogers network spans over 80,000 km of fibre backbone across the country and into key U.S. and global locations. This includes 12 data centres nationwide, including four Uptime Institute-certified Tier III facilities. Providing reliable uptime, powerful performance, and scalable connectivity with speeds up to 100 Gbps.¹

Rogers is one of Canada's largest communications providers, and the first Canadian carrier to launch 5G. We continue to make significant investments in our communities, team members and network to connect you and your customers to what matters most—and we are growing every day.

Choose Rogers for first-class, end-to-end support for all your clients' needs.
