Rogers Internet Services

Rogers Internet Services

Connectivity built for business

Rogers internet solutions range from dedicated fibre connectivity for fast, symmetrical speeds and DDoS attack protection, to cable connectivity with built-in malware prevention and specialist support. Spanning Canada from coast to coast, the Rogers network is a geographically diverse and flexible network, and we maintain hundreds of networking neighbours, both peers and partners, for close connections to Hyperscalers and international carriers to meet the ever-changing connectivity needs of today's businesses. Power your business customers and keep them connected with our cost-effective solutions.

Our internet access options include:

Rogers Dedicated Internet

Providing dedicated fibre-based access to the internet, this service offers dedicated speeds up to 10 Gbps¹ and sustained bandwidth up to the customer's committed bandwidth rate throughout the month with no risk of incurring usage overage charges. Burstable billing is also available for those customers who occasionally add bandwidth due to situations such as seasonal spikes in usage. Dedicated Internet boasts more than 200 unique, interconnected IP networks and geographic fibre backbone redundancy with millions of directly connected subscribers.

Rogers Business Fibre Internet

An easily deployed fibre-based access to the internet that offers faster data, voice and video, this service offers speeds of up to 100 Mbps to 1 Gbps,¹ up to the customer's committed bandwidth rate throughout the month with no risk of incurring usage overage charges. This service also comes with a static IP address block of 30, and access is provided using a GigE port and RJ45 interface.

Rogers Wireless Business Internet

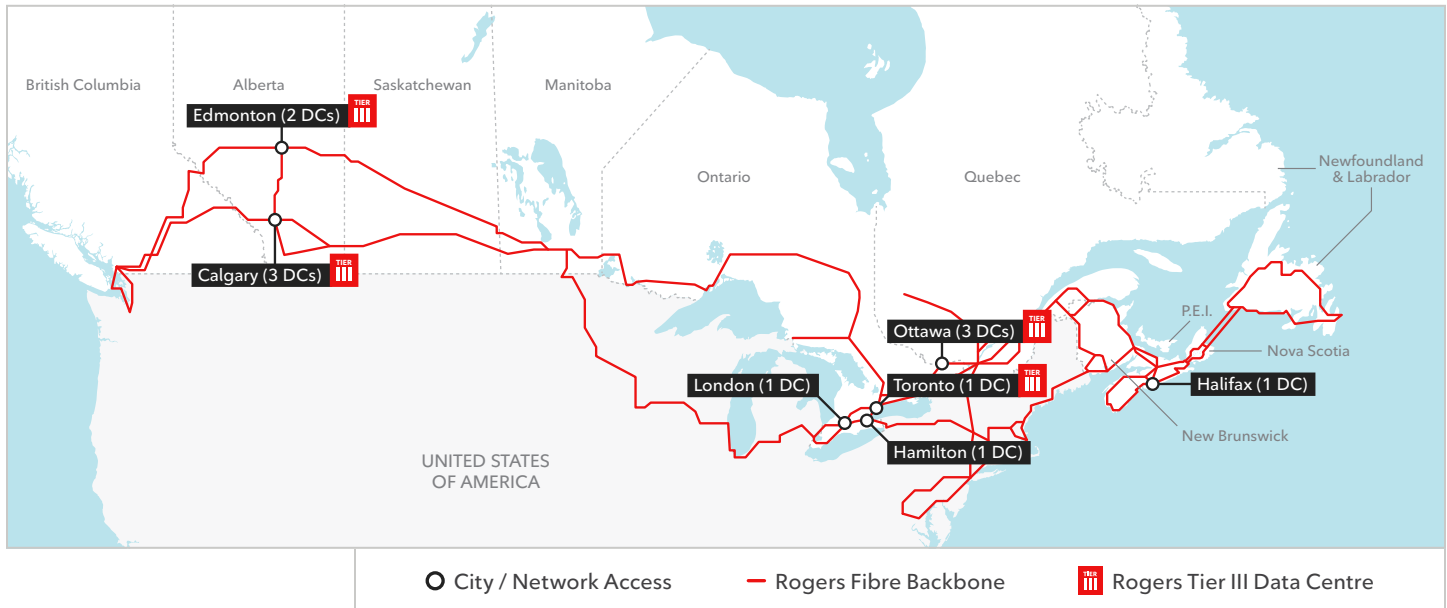

An ideal solution for remote or temporary locations, or as a reliable back up. There are two plan options for this service, which provides wireless internet access utilizing the Rogers LTE network and, depending on the package chosen, offers network-level automatic malware protection.

Rogers Business Internet

Providing customers with high-speed access to the Internet via the Rogers cable network, this service offers asymmetrical download speeds up to 1 Gbps,¹ with the option for a static IP address. For network redundancy, an LTE backup connection is currently available to customers in Ontario and New Brunswick.

The Rogers advantage

About Rogers Wholesale Solutions

With world-leading networks and connectivity solutions, Rogers is your connection in Canada

The Rogers network spans over 80,000 km of fibre backbone across the country and into key U.S. and global locations. This includes 12 data centres nationwide, including four Uptime Institute-certified Tier III facilities. Providing reliable uptime, powerful performance, and scalable connectivity with speeds up to 100 Gbps.²

Rogers is one of Canada's largest communications providers, and the first Canadian carrier to launch 5G. We continue to make significant investments in our communities, team members and network to connect you and your customers to what matters most—and we are growing every day.

Choose Rogers for first-class, end-to-end support for all your clients' needs.
