

Data Center and Colocation

Increase performance and safety, not costs and challenges.

IT infrastructure should work for you, not fight against you. Running your critical IT infrastructure in an off-site colocation facility allows you to prioritize your core business, not maintaining electrical infrastructure and cooling systems.

Enterprise-grade power without compromise

As digital transformation continues to advance, so does the urgency for secure compute and storage facilities. That means costs and challenges have increased exponentially, too.

Segra Data Centers and Colocation services provide a digital stronghold for mission-critical data and applications. As your business needs change, our highly resilient facilities scale with you. And our robust physical and digital security ensure essential information never falls into the wrong hands. The limits of your on-site server room are no longer a concern once your servers are housed in a highly scalable facility built to accommodate a wide range of technology operations.

More Than Just Space and Power ...

- 24/7 monitoring and management by on-site Segra Network Operations Center staff to ensure high levels of reliability and performance.
- Multiple layers of physical and electronic security ensure that only people with appropriate clearance can access your equipment.
- Highly redundant and diverse power sources, including whole site UPS, generator backup and dual-powered A&B supplies, keep critical systems running without interruption.
- Secure, accessible data storage and retrieval environments support peak cloud performance.
- Options for access-controlled cages or uncaged, individually locked cabinets, providing granular control to meet a range of operational and compliance requirements.

Why Segra?

At Segra, we understand that winning in today's business landscape requires more than just technology – it requires a strategic connectivity game plan, relentless agility and innovation, and a human touch.

We invest in our customers, our network and our people to deliver exceptional connectivity solutions and customer service that empower businesses to thrive.

Our local-market operating model means your whole team – from sales to network engineering to customer support – are all living and working in the communities they serve.

Specifications

Tier-3 or higher data center redundancy, with 99.99% uptime

Audited annually for SSAE 18 SOC 1 Type2, SOC 2 Type 2, HIPAA and PCI-DSS controls

Diverse network and power entry with redundant paths

Direct access to the Segra fiber network for connectivity and managed services

Public Cloud on-ramps and on-site Private Cloud solutions

Let's create winning connections together.
