

Allgress Insight Risk Management Vulnerability Module v6.1 Fast Facts

Significant funds have been spent on vulnerability management tools. With Allgress, you can derive greater value from those tools by consolidating and centralizing data across complex, global networks and summarizing that data into business-ready formats with projected risks. The Allgress Vulnerability Management Module assists security and risk professionals with making sense of their vulnerability data collected across complex networks.

Leveraging the Allgress Vulnerability Module, you can:

- Integrate with leading industry devices including Digital Defense, McAfee Vuln Manager, Tripwire IP360, Nessus, Nexpose, Outpost, Qualys, QualysGuard, QualysGuard Scan, QualysGuard Web App, Retina, Retina CSV, SAINT, Metasploit, IPsonar, RedSeal, Veracode, WebInspect, WhiteHat , McAfee DLP and Websense DLP.
- Prioritize vulnerabilities based on the business impact of the asset.
- Offer more than a point-in-time view by delivering trending and time-series views that reveal vulnerability volumes, severity levels and mitigation progress.
- Consolidate, store and filter all vulnerability scan data into a common repository.
- Reveal threat levels via business-unit and network-segment comparisons.
- Automate remediation through mitigation and management.
- Manage false-positives easily.
- Provision reports and dashboards via an easy to use Online Portal.
