

ark Extended Detection & Response (XDR)

Strengthen your security posture with ark's robust 24/7/365 XDR solution.

Delivering essential setup, alerting and intelligence to help you navigate the complexities of modern cybersecurity.

Enterprise-Class Security

As the complex cybersecurity landscape evolves, businesses are facing increasingly sophisticated threats. Designed to enhance security on servers, workstations and endpoints, **ark** Extended Detection and Response (XDR) goes beyond tool management to deliver maximum security and reliability.

Why ark XDR?

Traditional endpoint solutions often fail to provide comprehensive visibility and context, leading to gaps in security coverage. **ark's** XDR solution addresses these challenges with a unified, coordinated response framework executed by our 24/7/365 Security Operations Center (SOC) team.

Our integrated security stack includes endpoint security, network security and regular vulnerability scans to provide multi-layered defense against a wide range of cyber threats.

Fortify Defenses with SentinelOne

ark's XDR solution leverages advanced SentinelOne technology to provide comprehensive event narratives, enabling our SOC team to deliver rapid and informed responses to security incidents.

Experience Seamless Integration

Facilitated by our SOC team, benefit from out-of-the-box integrations with existing security tools for rapid deployment and immediate value realization without the hassle of extensive configuration.

Ace Compliance and Reporting

ark assists customers in meeting stringent regulatory requirements, including GDPR, HIPAA, PCI DSS and more to ensure compliance and ease the burden of regulatory adherence.

Trust the Experts

ark's SOC and security experts leverage a deep understanding of the evolving threat landscape and extensive experience across industries to ensure top-notch security management without the need for a large in-house security team.

Enhance Your Security Posture

ark manages triage and escalation activities with automated and manual remediation processes to ensure security events are handled swiftly and effectively. By providing extensive external support, proactively detecting endpoint threats and anomalies and delivering real-time alerts, **ark** empowers customers to confidently turn their focus back to key business initiatives.

Advanced Threat Detection and Proactive Threat Hunting

Utilizing a combination of behavioral analysis, machine learning algorithms and threat intelligence, **ark** identifies subtle Indicators of Compromise (IoCs) that traditional or automated systems may miss. Our team conducts ongoing threat hunts rather than relying solely on automated tools, allowing for early identification and neutralization of potential threats before they can cause significant harm.

24/7/365 Monitoring and Response

ark's SOC provides 24/7/365 monitoring and response capabilities to minimize security breach impact, including continuous endpoint activity monitoring, real-time alerting and rapid alert responses.

Tailored, Scalable Configurations

We understand that each organization has unique security requirements, which is why **ark** develops and implements security policies and configurations customized to specific customer risk profiles. Achieve enterprise-class security with flexible pricing models and the ability to scale solutions as needs arise.

Optimized Cybersecurity for Any Industry

Finance

Ensure PCI compliance and enhance your data security with our personalized XDR service. Designed to meet the rigorous security demands of the financial sector, our solution satisfies the industry's stringent regulatory compliance.

Healthcare

Protect sensitive patient and hospital data with **ark's** HIPAA and HITRUST-compliant XDR offering. Our advanced security measures empower healthcare customers to focus on patient care while we safeguard critical information.

Manufacturing

ark provides robust security for manufacturing companies, ensuring maximum protection against cyber threats and minimal operational disruption so manufacturers can navigate the complexities of digital transformation with ease.

Technology

In today's fast-paced threat environment, no one is immune to bad actors—even businesses with sophisticated technology infrastructure. **ark** helps technology companies safeguard intellectual property and maintain a secure environment for continued innovation.

Rise Above the Flood of Data

From edge to cloud, **ark** sets partnership in motion, delivering excellence and innovation at every scale—it's in our DNA.

DATA CENTERS

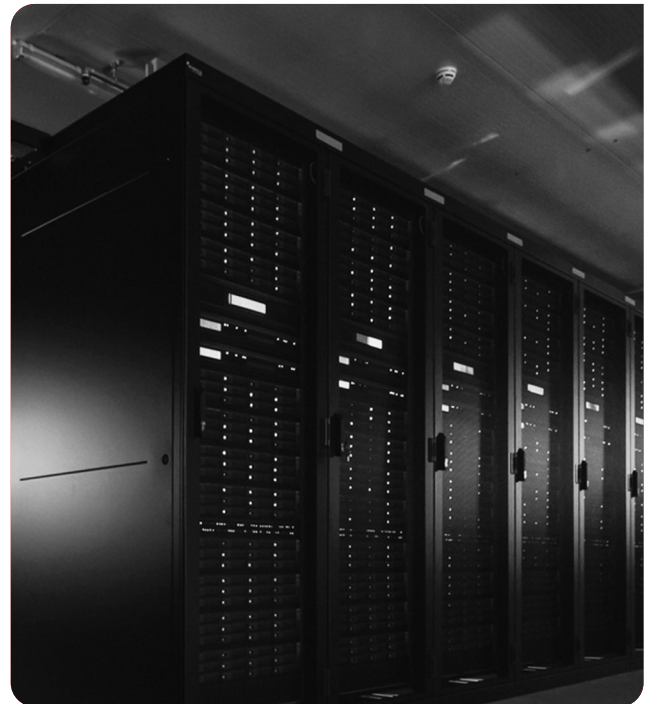

Built to meet the most stringent requirements and compliances, our enterprise facilities, supplemented with a robust suite of cloud services, deliver unmatched access to reliable, scalable infrastructure.

NETWORK

We are your network—listening, learning and educating to develop strong relationships that inform and power growth strategies for our customers.

AI + AUTOMATION

Architecting agile enterprise hybrid cloud solutions with scalability, power and automation enables our customers to drive innovation and growth in this flurry of data gravity.

The Future is ark.

ark data centers is a modern digital infrastructure company that delivers agile, scalable enterprise-class solutions. **ark** is the edge—with owned infrastructure spanning emerging edge markets, **ark** offers uniquely positioned data centers, network infrastructure and Internet Exchanges to drive growth for our customers. With partnership, performance and sustainability at the forefront, **ark** combines the space, power, network and security with the technical acumen needed to meet the revolutionary data-driven demands of today and tomorrow.
