The Private Cloud Platform You Prefer, Managed.

Not every workload belongs in a hyperscale cloud. For many organizations, the mission critical applications the business was built on would need to be refactored to fit properly. That's a long, costly process even for organizations that have the right skillsets, but debilitating for those that don't. It presents an unenviable choice: maintain applications that run the business but prevent modernization and curtail innovation, or fix that which isn't broken and introduce risk in exchange for flexibility and scalability.

Expedient Private Cloud is designed to help you get the benefits of cloud for your virtualized workloads while leveraging the technology stack you already know and prefer. Choose between foundational technology from VMware or Nutanix and pair it with the flexibility of a service model. We provide a seamless, scalable, and efficient solution that enables you to focus on your business, not your infrastructure.

Features

Dedicated Hardware
No noisy neighbors, no resource pooling

Fully Managed
Expedient manages the infrastructure, so you can manage your operating systems and applications more effectively

High Performance
All flash storage and high frequency CPUs ensure applications perform under peak load

Secure
With two-factor authentication and data-at-rest encryption, workloads are secured from top to bottom

Reliability
Hardware-level redundancy ensures applications can recover in the event of a failure

Unified Infrastructure
Integrate compute, storage, and networking into a dedicated, cohesive platform

Scalability
Easily scale infrastructure based on business needs

Simplified Management
Access workloads and resources via dedicated management pane

The Cloud Path of Your Choice

Expedient Private Cloud is built to utilize the full capabilities of VMware or Nutanix infrastructure, including the hypervisor, storage, and software-defined networking to deliver an end-to-end cloud platform. Combining that platform with Expedient's management, services, and full stack cloud service provider expertise eliminates concerns about migrations and ensures your workloads perform at the highest level.

	VMware	Nutanix
Platform	Cloud Foundation	Nutanix Cloud
Management	vCenter	Prism Central
Hypervisor	ESXi	AHV
All-Flash Storage	Standard/High Performance	Acropolis Storage
Networking	NSX	Flow
Backups	Cloud Data Protection	
Disaster Recovery	DRaaS	
OS Management	Operations CTRL	
Connectivity	Cross connections to Expedient colocation or hyperscale cloud	
Security Services	Security CTRL	

Benefits

Agility
Respond to business demands faster by adding the resources you need, when you need them

Reliability
N+1 hardware ensures high availability and minimizes downtime

Security and Compliance
HIPAA, HITECH, SOC1, SOC2, SOC3, PCI-DSS, CSA compliant

Scalability
Grow your infrastructure in tandem with your business

Simplicity
Manage your entire infrastructure from a single, intuitive interface

Support
24×7 support. We're here to help when you need it

Easy-to-use and Powerful
Single pane of glass to see your resources at a glance

Cost Effective
Only pay for what you use with a predictable monthly cost
